Attendance and Payroll Guide

Jome-Tech Engineering · 6 November 2026

The week at a glance

Staff punch every day, each site confirms its days, and on Saturday each site's payroll pays its own staff once.

The payroll passes between manager and supervisor until approval. After that, its days and amounts can't change.

1. **Monday to Saturday, each day:** import the clock-in file, fix what's wrong, and confirm the day. Each site confirms its own.
2. **Saturday:** once all six days are confirmed, a manager prepares the payroll and adds any advances or allowances.
3. **Supervisor:** checks each person's days. Supervisors never see money.
4. **Manager:** approves. The payroll is now locked.
5. **Pay day:** pay people, mark them paid, and send payslips on WhatsApp.
6. **Manager:** closes the payroll.

The pages are under **People** in the menu: **Employees**, **Attendance** and **Payroll**.

Who does what

Supervisors run the days; managers handle anything involving money. Admins can do everything managers can.

Task	Supervisor	Manager or admin
Add and edit employees	Yes	Yes
See or set daily rates	No	Yes
Import punches, link clock IDs	Yes	Yes
Set which site a machine is at	No	Yes
Mark and confirm a day	Yes, at their sites	Yes
Reopen a confirmed day	No	Yes
Prepare payroll, add adjustments	No	Yes
Check the days (“The days are right”)	Yes	Yes
Approve payroll	No	Yes
Payslips, register, mark paid, close	No	Yes

Other roles, such as Sales, Stores and Gate, can't open these pages.

One-time setup

Do this once, in this order. New employees take their site from the machine, so set the machines before linking people.

1. **Export the file.** In the ZKTeco software, export the **Transaction** report as Excel or CSV. A PDF can't be imported.
2. **Upload it.** Go to **Attendance** → **Import punches** and upload the file. The machines appear on the right.
3. **Set each machine's site.** A manager sets JOMETECH2 and JOMETECH 1 to the right sites and clicks **Save** on each.
4. **Link the clock IDs.** Under **Clock IDs not linked to anyone**, each row is already set to **Add as new employee**, or to an existing person with the same name. Check them, then click **Save links**.
5. **Check for near-duplicates.** Two IDs with exactly the same name become one person. Different spellings don't: Bonface and Boniface Muchoki would become two employees. For those, pick the existing person from the list.
6. **Complete each employee.** Under **Employees**, check the home site and add the trade. A manager adds the daily rate.

The **home site** decides whose payroll a person is on, so check it for anyone who works at both sites.

Every day

The app fills in the day from the punches, so the supervisor only fixes what's wrong. Saturday is a normal day; Sunday isn't part of the pay week.

1. **Import** the day's export under **Attendance** → **Import punches**. Importing the same punches twice adds nothing, so a file covering several days is fine.
2. **Open the day** under **Attendance**, and choose the site and date.

3. **Look at the flagged rows** and change any status that's wrong. Add a note if it helps.
4. **Click Save** to keep your work and come back later.
5. **Click Save and confirm the day** when everyone is marked. The day is then locked and ready for payroll.

How the app suggests a status

It adds up hours from the first punch to the last, without lunch.

Hours worked	Suggested status	Counts for pay
7 or more	Present	1 day
3.5 to under 7	Half day	½ day
Under 3.5	Absent, flagged “Short day”	0
No punches, on a day that has an import	Absent	0
No evening punch	Present, flagged “No evening punch”	1 day unless you change it

You can also choose **Sick**, **Leave**, **Off** or **Holiday**. These all pay 0, unless a manager adds an allowance.

Check “No evening punch” every time. The app can't work out the hours, so it assumes Present. Change it to Half day if the person left early.

A day with no import suggests nothing. Mark people by hand, or use **Fill the empty ones from it** to copy the last day marked.

A day nobody worked still has to be confirmed for payroll: mark everyone **Off** and confirm it.

Staff who work at both sites

A day is marked where the person worked, and they're paid once, through their home site.

- **Who marks the day:** the site of their first punch that day. With no punch, it's their home site.
- **The other site** sees “Worked at HQ” on that row and can't change it.
- **Both sites in one day** is still one day. Hours run from the first punch to the last, on either machine.
- **Payslip:** one per person per week, on their home site's payroll, showing where each day was worked.
- **Waiting:** a site's payroll can't be prepared until the other site confirms the days its staff worked there. The Payroll page names the site and day, with a link to it.

Example: Leon's home site is Site B. On Friday he punches in at HQ. HQ marks and confirms his Friday, and Site B's payroll waits for that. Leon then gets one payslip from Site B, with Friday labelled HQ.

Saturday: payroll

Each person's pay is days worked × daily rate, plus or minus adjustments. There are no statutory deductions and no overtime.

1. **Prepare (manager).** Go to **Payroll**, choose the site and week, and click **Prepare payroll**. The button stays greyed out until all six days are confirmed. Saturday must be confirmed first, so this comes after Saturday's attendance.
2. **Add adjustments (manager).** On a person's row, click **Advance or allowance**, choose **Deduct** or **Add**, and enter the amount and a reason, such as “Advance 12 Nov”. Sunday work goes here too.
3. **Check the days (supervisor).** Open the payroll, compare each person's days, and click **The days are right**.

4. **Approve (manager).** Click **Approve**. The payroll is now locked, along with that week's attendance.
5. **Pay and mark paid (manager).** Click **Mark paid** on a row, with M-Pesa, cash or bank and a reference. Or use **Mark everyone paid** for everyone left.
6. **Close (manager).** Once everyone is paid, click **Close the payroll**.

Payslips and the register

Payslips are ready once the payroll is approved, on each person's row:

- **PDF:** a small A6 slip.
- **Excel:** the same details in a spreadsheet.
- **Send on WhatsApp:** on a phone, this opens the share sheet with the PDF attached; choose WhatsApp. On a computer, it saves the PDF and opens the person's chat, and you attach the file yourself.

Register (Excel), at the top of the payroll, lists everyone with their days, pay and total.

Fixing mistakes

What you can fix depends on how far the week has gone: before approval almost anything can be corrected, and after it only through next week's pay.

Problem	What to do
A status is wrong, day not confirmed	Change it on the Attendance page and save
A status is wrong, day confirmed	A manager clicks **Reopen to change it**; correct it and confirm again
Attendance corrected after the payroll was prepared	If the days are already checked, a manager clicks **Back to draft**. Then **Work it out again**, and the supervisor checks the days again. Adjustments are kept
A wrong day on an approved payroll	It can't be reopened. Add an adjustment on next week's payroll
Approve refused: no daily rate	Add the rate under Employees, then **Back to draft** and **Work it out again**
Approve refused: pay below zero	Reduce that person's deductions
Payroll says it's waiting for another site	That site confirms the day named on the page
Punches not showing	Link the clock ID under **Import punches**, and check the machine has a site
Someone has left	Open the employee and click **Mark as left**. Days already worked are still paid
Marked paid by mistake	There's no undo yet. Note it and tell the developer

Practice run with the test file

The file *docs/Test attendance 26-31 Oct 2026.xlsx* holds one made-up week with the awkward cases built in.

Use it on your local app, logged in as admin. Its second sheet lists the expected result for each person and day.

1. **Upload it** under **Attendance** → **Import punches**: 278 new punches.
2. **Set the machines:** JOMETECH2 to HQ, JOMETECH 1 to Site B.
3. **Click Save links.** That adds 12 people, with Irene's two clock IDs as one person.
4. **Check Employees:** TEST Leon's site should be Site B; change it if not.
5. **Set every daily rate to 1,000,** so the totals below are easy to check.
6. **Confirm the days:** open each day from Monday 26 to Saturday 31 October, for each site, and click **Save and confirm the day**. That's 12 confirmations.
7. **Prepare both payrolls** for the week of 26 October, check the days, approve, and open a payslip.

Add rates before preparing the payroll: the rate is copied when it's prepared. Your own employee, Njuki Leon, isn't in the file. Njuki shows as Absent at HQ, which is expected, and doesn't appear on the payroll.

What you should see

Person	Site	What to check	Days to pay
Amina	HQ	Normal week	6
Brian	HQ	Wednesday's double punch counts once	6
Carol	HQ	Wednesday flagged “No evening punch”	6
David	HQ	Thursday: home at lunch, Half day	5.5
Esther	HQ	Tuesday: no punches, Absent	5
Felix	HQ	Friday: Absent, flagged “Short day”	5
Grace	HQ	Monday: 10:20 to 14:42, Half day	5.5
Henry	HQ	Saturday: left at 13:05, Half day. Sunday not paid	5.5
Irene	HQ	Two clock IDs, one person	6
James	Site B	Normal week	6
Karen	Site B	Normal week	6
Leon	Site B	Friday marked at HQ, “Worked at HQ” at Site B	6

Totals at KES 1,000 a day: HQ 50.5 days, KES 50,500. Site B 18 days, KES 18,000. Leon is only on Site B's payroll.
